

**Public Opinion Poll**

26/11/15

On behalf of:

## **Fieldwork Dates**

11<sup>th</sup>-17<sup>th</sup> November 2015

## **Data Collection Method**

The fieldwork was conducted online. Invitations to participate were sent to members of online panels. Non-response from different demographic groups was taken into account during the fieldwork phase and in the post-fieldwork adjustments.

## **Sample**

All residents aged 18+ in United Kingdom. The sample size is 1,528 respondents.

## **Weighting**

Results were weighted to reflect the profile of all UK adults aged 18 and above. Targets were Age/Sex, Government Office Region (GOR), Indices of Multiple Deprivation (IMD) and past vote. All targets are based on Official Statistics from the ONS that are awarded National Statistics status, and the results of the 2015 General Election.

## **EU Referendum Voting Intention Adjustments**

The EU Referendum voting intention results are presented over 4 tables and do not factor in self-reported likelihood to vote. Short descriptions of the EU Referendum voting intention adjustments is described below but for more information please visit the BMG website.

**Table 1** – EU referendum voting intention figure full base, with base weights applied.

**Table 2** – This is a valid table of the previous (*Table 1*) .e. don't knows at prefer not to say removed. EU referendum voting intention table (i.e. excluding don't knows), with base weights applied.

**Table 3** – EU referendum leaning/squeeze question asked to those who respond don't know or prefer not to say to the main question.

**Table 4** – Main EU referendum question with '*leaners*' added in at a factor of 0.5.

**Table 5** – This is a valid table of the previous (*Table 4*) i.e. don't knows at prefer not to say removed. This table is the final published EU Referendum voting intention figure.

## **Margin of Error**

As a sample of the population was interviewed, the results are subject to a margin of error around various estimates. This means that, given the random nature of the sampling process, we can be confident that the actual result lies somewhere within

the margin of error. For example, where 50% of a given population (the worst case scenario) responded in a particular way, with a sample of 1,500 we can be 95% certain that the actual value will fall 2.5% either side of the result. However, where 90% of a given population responded in a particular way, with a sample of 1,500 we can be 95% certain that the actual value will fall 1.5% of the estimate. Users should note that subsamples within cross-breaks will be subject to a higher margin of error, so any conclusions drawn should be treated with caution.

### **Questions & Presentation**

All results are shown in full below, in order, and using the wording that was put to respondents. For questions where the list of responses is names of parties, names or statements, these will typically have been displayed to respondents in a random order, but be ordered in the attached tables. Questions typically not shown in a random order are those where there is a natural or accepted order to maintain i.e. a scale from “strongly agree” to “strongly disagree”, a list of numbers from 0 to 10, or questions that have a factual, rather than opinion-related answer, such as key demographic information. Responses such as “Other”, “Don't know” and “Refused” are not usually randomised.

Data were collected, analysed and weighted by BMG Research.
